

DevOps as a Service for Mainframe

WHY DEVOPS?

Empower mainframes with agility. Improve collaboration between software development and operations teams. Speed software delivery and build to continuous delivery and integration across systems with DevOps.

Enable development, QA, security, and operation teams work as one, and deploy discrete software development tools within one toolkit. Minimize mainframe complexities and legacy issues. And empower the next generation of mainframe with:

WHAT IS DEVOPS FOR MAINFRAME?

The DevOps is an agile solution that promotes efficiency and improves quality. IBA Group develops a pipeline that integrates build, QA, security management, and deployment in the development and release process.

EMPOWER MAINFRAMES

- Development, QA, security, and operation teams to work as one
- Discrete software development tools to work as one toolkit
- Next generation developers to manage mainframe complexities efficiently

MEET THE DEVOPS TRANSFORMATION PROCESS

IBA Group	You
<p>Analyzes environment (technologies, infrastructure, toolsets, platforms, and challenges).</p> 	<p>1  Oversee the process.</p>
<p>Develops transformation plan and solution.</p> 	<p>2  Finalize and approve plan and solution.</p>
<p>Applies for access to infrastructure</p> 	<p>3  Grant access to infrastructure.</p>
<p>Develops minimal viable product (MVP) of CI/CD.</p> 	<p>4  Use one push button pipeline.</p>
<p>Implements new features based on continuous feedback.</p> 	<p>5  Access new features.</p>
<p>Makes DevOps a unified and standardized process. Provides consulting on DevOps.</p> 	<p>6  Introduce DevOps to organizational culture and processes. Expand DevOps to other applications.</p>
